

ABSTRACT

A navigation route planning system is provided with various interlinked facilities, including a user I/O facility, a route planning facility, a position determination facility, and a destination and institutional table facility. In particular, the planning facility is arranged for under control of a set of interval point requests received from a user, one or more timing indications each associated to a respective interval point request, and furthermore dynamic traffic condition informations received from an overall notification system, to dynamically generate a route listing for a route to be travelled in accordance with the interval points, associated timing indications and dynamic traffic condition informations.
